Define Angle In Math

Illustrated definition of Angle: The amount of turn between two lines around their common point (the vertex).

Angle Definition (Illustrated Mathematics Dictionary)

Angles that are greater than 90 degrees and less than 180 degrees are called obtuse angles. Angles that are larger than a straight angle but less than 1 turn (between 180 degrees and 360 degrees) are called reflex angles. An angle that is 360 degrees, or equal to one full turn, is called a full angle or complete angle.

The Definition of an Angle - ThoughtCo

An angle can be identified in two ways. The angle symbol, followed by three points that define the angle, with the middle letter being the vertex, and the other two on the legs. So in the figure above the angle would be $\angle ABC$ or $\angle CBA$. So long as the vertex is the middle letter, the order is not important.

Angle - Math word definition - Math Open Reference

Definition Of Angle. An angle is formed by two rays with a common endpoint (called the vertex). In the figure shown, angle AOB is formed by the rays OA and OB with a common endpoint O.

Definition and examples angle | Define angle - Geometry ...

Degree Angle Measure - Definition with Examples. A unit of measure used to measure the magnitude of an angle. 1 degree equals 1/360 of a complete revolution in magnitude. The Complete K-5 Math Learning Program Built for Your Child.

Degree Angle Measure - Definition with Examples - Splash Math

A angle. The orientation of the patella relative to the tibial tubercle. The angle is formed by the intersection of a line bisecting the long axis of the patella and a passed through the tibial tubercle to the apex of the inferior pole of the patella.

Angle (geometry) | definition of Angle (geometry) by ...

Right angles are one of the most common and interesting angles in all of geometry. It even has its own angle symbol. In the figure above, set the angle to 90° and see that instead of a small arc, the angle is marked with a small square symbol.
