

Electronic Brake Force Distribution

Electronic Brake Force Distribution

Electronic brakeforce distribution (EBD or EBFD) or electronic brakeforce limitation (EBL) is an automobile brake technology that automatically varies the amount of force applied to each of a vehicle's wheels, based on road conditions, speed, loading, etc. Always coupled with anti-lock braking systems (ABS), EBD can apply more or less braking pressure to each wheel in order to maximize ...

Emergency brake assist (EBA) or brake assist (BA or BAS) is a generic term for an automobile braking technology that increases braking pressure in an emergency. The first application was developed jointly by Daimler-Benz and TRW/LucasVarity. Research conducted in 1992 at the Mercedes-Benz driving simulator in Berlin revealed that more than 90% of drivers fail to brake with enough force when ...

The braking system is one of the most important pieces of safety equipment in a vehicle. The components in the braking system convert the brake force applied by the driver into the required braking effect in an optimal way, ensuring the vehicle is decelerated safely and comfortably.

A generation or two ago, the buzz in the brake world was the shift from drum to disc technology. But innovation didn't stop there. Brake technology has continued to evolve, through passive, active, integrated and, most recently, automated braking applications.

The NK35 Power Brake, a de-coupled brake by wire system, is designed to sense the driver's intent and provide on demand hydraulic pressure to the brake calipers. It is specially suited to replace conventional Booster / Master Cylinder actuation units in hybrid or fully electric vehicles where engine vacuum is no longer available.
