Geology (from the Ancient Greek γῆ, gē ("earth") and -λογία, -logia, ("study of", "discourse")) is an earth science concerned with the solid Earth, the rocks of which it is composed, and the processes by which they change over time. Geology can also include the study of the solid features of any terrestrial planet or natural satellite such as Mars or the Moon.

Chapter 3 - Minerals : The science of geology is founded on basic principles that are useful for making observations about the world around us. Everything around us is made of chemical compounds that have testable and indentifying characteristics, allowing them to be classified.

Introduction to Geology - Geology Cafe.com

What is science? Science is the concerted human effort to understand, or to understand better, the history of the natural world and how the natural world works, with observable physical evidence as the basis of that understanding 1.It is done through observation of natural phenomena, and/or through experimentation that tries to simulate natural processes under controlled conditions.
