Ideal systems. The simplest case of a thermodynamic system is a gas of ideal (dimensionless and non-interacting) particles in a cylinder with a reversible piston at a fixed temperature  $T$ . Varying pressure  $P$  exerted on the piston will reversibly compress or expand the gas to a certain volume  $V$ . From the ideal gas law follows that

Introduction. We use the concept of non-ideal solutions for concentrated solutions. A variety of forces act on real mixtures, making it difficult to predict the properties of such solutions. Non-ideal solutions are identified by determining the strength and specifics of the intermolecular forces between the different molecules in that ...
