Histology of Ganglia. A ganglion (pl. ganglia) is a mass of nerve cell bodies found outside of the central nervous system (CNS) along with some glial cells and connective tissue. Ganglia have both afferent and efferent nerve fibers. As they exist outside of the CNS, they are sometimes referred to as peripheral ganglia. In this article we will discuss the histology of the ganglia and ...

The gastrointestinal tract (digestive tract, digestional tract, GI tract, GIT, gut, or alimentary canal) is an organ system within humans and other animals which takes in food, digests it to extract and absorb energy and nutrients, and expels the remaining waste as feces. The mouth, esophagus, stomach and intestines are part of the gastrointestinal tract.

The serratus anterior muscle is a fan-shaped muscle at the lateral wall of the thorax. Its main part lies deep under the scapula and the pectoral muscles. It is easy to palpate between the pectoralis major and latissimus dorsi muscles. In athletic bodies the muscle may be even visible to the naked eye along the ribs underneath the axilla.. The serratus anterior muscle originates from the 1st to ...

A microorganism, or microbe, is a microscopic organism, which may exist in its single-celled form or in a colony of cells.. The possible existence of unseen microbial life was suspected from ancient times, such as in Jain scriptures from 6th century BC India and the 1st century BC book On Agriculture by Marcus Terentius Varro. Microbiology, the scientific study of microorganisms, began with ...

Animal research and animal research facilities are critical to the biomedical research enterprise. Animal species are used in every stage of the research and development effort-from discovery, to development and safety testing, to clinical trials, and to manufacture-because their biological systems, genetic structures, and immunological responses, in various ways, closely mirror ours as a species.
