Preface. Those concerned with grounding engineers and scientists in the procedures of optical evaluation have found that spatial frequency, wave-front distortion, and optical transfer function, though not particularly difficult concepts to understand, do not easily become part of one's thinking, and therefore practice, as the concepts of rays,...

Introduction to Modulation Transfer Function | Edmund Optics

The Optical Transfer Function of Imaging Systems deals extensively with the theoretical concept of the optical transfer function (OTF), its measurement, and application to imaging devices. The OTF is

a mathematical entity describing how well the subject is transferred into an image via the lens.

Optical Transfer Function (OTF) Modulation Transfer Function (MTF) The Optical Transfer Function (OTF) is a complex-valued function describing the response of an imaging system as a function of spatial frequency. Modulation Transfer Function (MTF) = magnitude of the complex OTF Phase Transfer Function (PTF) = phase of the complex OTF.
