Sceletium Chemistry. The range of phenolic alkaloids in *Sceletium tortuosum* belong to the crinane class of compounds and fall into four distinct structural categories defined by their alkaloid skeletal type: (1) The 3a-aryl-cis-octahydroindole class (e.g. mesembrine) (2) The C-seco mesembrine alkaloids (e.g.

This chapter describes the structures of the alkaloids, synthesis of alkaloids, and pharmacology of alkaloids of the Calabar bean (*Physostigma uenenosum*). Seven alkaloids are isolated from the Calabar bean. Among the five alkaloids with known structures, physostigmine, eseramine, and physovenine are synthesized.

Alkaloids: chemistry and pharmacology. Volume 45.

"The Amaryllidaceae Alkaloids," reviewed in Vols. 6, 11, and 15 of this treatise, have been updated, and several new alkaloids of this class are listed. Occurrence, spectral properties, structure, synthesis, and biosynthesis of these alkaloids are covered in these chapters, and pharmacological properties whenever known are reported.

Pyrrolizidine alkaloids (PA) are widely distributed in plants throughout the world, frequently in species relevant for human consumption. Apart from the toxicity that these molecules can cause in humans and livestock, PA are also known for their wide range of pharmacological properties, which can be exploited in drug discovery programs. In this work we review the current body of knowledge ...

In addition to chemistry, the chapter discusses important analytical details and brings the pharmacology of these alkaloids up to par. It is pleasing to note that this volume continues to benefit from material collected and presented by an international group of collaborators.

Tropane alkaloids (TA) are valuable secondary plant metabolites which are mostly found in high concentrations in the Solanaceae and Erythroxylaceae families. The TAs, which are characterized by their unique bicyclic tropane ring system, can be divided into three major groups: hyoscyamine and scopolamine, cocaine and calystegines. Although all TAs have the same basic structure, they differ ...

Alkaloid. Alkaloids are a class of naturally occurring chemical compounds that mostly contain basic nitrogen atoms. This group also includes some related compounds with neutral and even weakly acidic properties. Some synthetic compounds of similar structure are also termed alkaloids.

classify "alkaloids" into various sub-groups, and to review these groups individually. In 1950, "The Alkaloids, Chemistry and Pharmacology" series of volumes began publication under the editorship of R.H.F. Manske, and the series continues today. Classification of alkaloids was made on a structural basis, and groups of alkaloids were
